अभिगृहित पूर्ण विनिर्देश

एतद्वारा सूचना दी जाती है कि आवेदनों में किसी पर पेटेंट अनुदान का विरोध करने वाले इच्छुक व्यक्ति राबपत्र के इस निर्गमन की तिथि से चार महीने के भीतर या उक्त चार महीने की समाप्ति के पूर्व, प्ररूप 4 में यदि आवेदित किया हुआ हो, तो परवर्ती एक महीने के भीतर, किसी समय, नियंत्रक, पेटेंट को ऐसे विरोध की सूचना प्ररूप 7 में उपयुक्त कार्यालय में दे सकते हैं। विरोध का लिखित कथन साक्ष्य के साथ, यदि कोई हो, दो प्रतियों में उक्त सूचना के साथ या अगले दो महीने की अवधि के भीतर दाखिल किया जाए। इस संदर्भ में, बधा संशोधित पेटेंट अधिनियम, 1970 की धारा 25 एवं पेटेंट नियम, 2003 के नियम 55 से 57 का अवलोकन किया जा सकता है।

उपयुक्त कार्यालय द्वारा विनिर्देश एवं चित्र आरेख, यदि हो, के छायाप्रति की आपूर्ति छायाप्रति शुल्क के रूप में प्रति पृष्ठ रु. 4/- की अदायगी पर की जा सकती है।

COMPLETE SPECIFICATION ACCEPTED

Notice is hereby given that any person interested in opposing the grant of a Patent on any of the Applications, may, at any time within four months from the date of this issue of Gazette or within further period of one month if applied for in Form 4 before the expiry of the said period of four months, give notice to the Controller of Patents at the Appropriate Office on Form 7 of such opposition. The Written Statement of Opposition accompanied by evidence, if any, should be filed in duplicate along with the said notice or within further period of two months. Section 25 of The Patents Act, 1970 as amended and Rules 55 to 57 of The Patents Rules, 2003 may be referred to in this regard.

Photo copies of the specification and drawings, if any, can be supplied by the Appropriate Office on payment of photocopying charges @ Rs. 4/- per page.

Indian Classification :- 48 A **194372**

International Classification⁷ :- G 01 R 31/02

Title :- "A DEVICE FOR DETECTING BEARING INSULATION FAILURE IN LARGE ELECTRIC ROTATING MACHINES"

Applicant :- BHARAT HEAVY ELECTRICALS LIMITED, BHEL House, Siri Fort, New Delhi-110049.

Inventors :- RAMNIWAS PARMAR - INDIA
TUNGA SAI KUMAR - INDIA.

Kind of Application :- PROVISIONAL/COMPLETE

Application for Patent Number 579/del/1995 filed on 30/03/1995

COMPLETE LEFT AFTER PROVISIONAL SPECIFICATION-18/06/1996.

Post Dated to -30/03/1995.

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office, New Delhi Branch - 110 008.

(Claims 02)

A device for detecting bearing insulation failure in large electric rotating machines, comprising:

- (a) an electromagnetic transducer such as a split toroidal coil (1) placed around the rotor shaft (2) of the said electric rotating machine and secured to the frame or casing of the said electric rotating machine;
- (b) an amplifier (3) connected between the output and input terminals of the said toroidal coil (1) having a resistance (4) connected between the said coil and the said amplifier (3) in parallel; the said amplifier (3) connected with the said coil (1) through a shielded cable (5);
- (c) a filter (6) connected between output and input terminals of the said amplifier (3);
- (d) a relay (7) connected to the said filter (6) for actuating an alarm for indicating bearing insulation failure in large electric rotating machines.

Title :- "A PROCESS FOR THE PRODUCTION OF ACETIC ACID"

Applicant :- BP CHEMICALS LIMITED, of Britannic House, 1 Finsbury Circus, London EC2M 7BA, England.

Inventors :- MICHAEL DAVID JONES - BRITISH
ANDREW DAVID POOLE - BRITISH

Kind of Application :- COMPLETE/CONVENTION

Application for Patent Number 2247/del/1996 filed on 16/10/96

Convention No. 9521501.8/United Kingdom/20.10.95

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office, New Delhi Branch - 110 008.

(Claims 13)

A process for the production of acetic acid which process comprises reacting carbon monoxide with a carbonylatable reactant introduced to a reactor wherein there is maintained at a temperature in the range of 100 to 300°C a liquid reaction composition comprising a Group VIII noble metal catalyst, known methyl iodide promoter of an optional known co-promoter and at least a finite concentration of water characterized in that the carbonylatable reactant comprises greater than 10% by weight dimethyl ether and the concentration of water in the liquid reaction composition is from 1 to 10% by weight.

International Classification⁷ :- C09D 11/08

Title :- "PROCESS FOR PREPARATION OF CARBOXYMETHYL TAMARIND KERNEL POWDER FOR USE IN PRINTING POLYESTER FABRICS."

Applicant :- HINDUSTAN GUM & CHEMICALS LIMITED, Birla Colony, Bhiwani- 125021 (Haryana), Indian

Inventors :- SHYAMAL PURKAYASTHA—INDIAN
RATAN LAL RAY - INDIAN

Kind of Application :- COMPLETE

Application for Patent Number 1513/DEL/1999 filed on 30/11/1999

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office, New Delhi Branch - 110 008.

(Claims 05)

A process for the preparation of Carboxymethyl Tamarind Kernel Powder having a Degree of substitution (D.S.), of 0.1 to 0.4, from Tamarind Kernel powder for use as Thickener in the printing of Polyester fabrics with Disperse dyes, the process comprises the following steps:

- (a) Mixing dry 300 mesh Tamarind Kernel Powder with 7-30 % of sodium monochloro acetate in a jacketed mixer;
- (b) Adding slowly 4-16 % of caustic soda dissolved in water to the mixture obtained in step (a);
- (c) The mixture obtained in step (b) is heated to 50° C to 70° C by passing hot water through the mixture's jacket and maintained at that temperature for 2 to 5 hours;
- (d) Adjusting the pH of the mixture obtained in step (c) between 9.5 – 11.5 by adding a weak organic acid, as herein described;
- (e) The mixture obtained in step (d) is dried by any conventional method as then ground in a conventional micropulveriser.

(Claims 9)

A process for the preparation of a stable and robust pharmaceutical tablet composition comprising:

(a) mixing:

- i. at least 50% w/w hydrated form of valacyclovir hydrochloride having water of hydration of at least 3% w/w and particle size less than 355-µm;
- ii. at least 0.05-5% w/w of conventional binding agent as herein described,
- iii. at least 5-40% w/w of conventional filler as herein described,
- iv. at least 0.5-7% w/w of disintegrant as herein described,

(b) granulating to form granules as herein described,

(c) drying the granules,

(d) blending the dried granules with 0.05-2% w/w of conventional binding agent and lubricant as herein described,

(e) compressing the blended mixture to form a tablet.

ROELOF ARY LANS BOVENBERG - DUTCH

Kind of Application :- COMPLETE/DIVISIONAL

Application for Patent Number 913/del/2002 filed on 09/09/2002

Divisional out of patent Application No. 1150/del/98 filed on 30.4.98

Anti Dated to 30.4.98

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office New Delhi Branch - 110 008.

(Claims 6)

A process for the production of N-deacylated-7-ACA compound comprising the steps of:

fermenting a microbial strain capable of β -lactam production and expressing acyltransferase and expandase activities, and additionally hydroxylase and acetyltransferase activities, in the presence of a side chain precursor according to formula (1)

wherein

n is an even number of at least 2, and

X is $(\text{CH}_2)_p\text{-A-(CH}_2\text{)}_q$, wherein

p and q each individually are 0, 1, 2, 3 or 4, and

A is CH=CH , $\text{C}\equiv\text{C}$, CHB , C=O , O, S, NH, the nitrogen optionally being substituted or the sulfur optionally being oxidized, and B is hydrogen, halogen, C_{1-3} alkoxy, hydroxyl, or optionally substituted methyl,

with the proviso that $p+q$ should be 2 or 3, when A is $\text{CH}=\text{CH}$ or $\text{C}\equiv\text{C}$, or $p+q$ should be 3 or 4, when A is CHB , $\text{C}=\text{O}$, O , S or NH ,

or a salt, ester or amide thereof, said side chain precursor yielding a acyl-6-APA derivative, the acyl group having a structure according to formula (2)

wherein X is defined as above,

said acyl-6-APA derivative being *in situ* expanded in the fermentation broth to produce corresponding acyl-7-ACA derivative;

- recovering the acyl-7-ACA derivative from the fermentation broth;
- deacylating said acyl-7-ACA derivative to produce N-deacylated-7-ACA derivative, and
- recovering the crystalline N-deacylated-7-ACA compound.

Applicant	AVECIA LIMITED, a British company of Hexagon House, Blackley, Manchester, M9 8ZS, England.	
Inventors	ALAN PARTRIC CHORLTON – U.K. JAMES MASON – U.K.	
Kind of Application	Convention-Complete	

Application for Patent Number 2293/Del/ 95 filed on 12th DEC. 95.
Convention date 20.1.1995/ 9501089.8/ U.K.

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003)
Patent Office Branch, New Delhi – 110 008.

(6 Claims)

A process for the preparation of an azo pyrazolone compound of formula 1

which comprises diazotising a naphthylamine sulphonic acid of formula

in known manner and coupling the resulting diazo compound with a sulphonated 3-methyl-1-phenylpyrazolone of formula

in a known manner and converting the resulting monoazo compound to the salt of an alkali metal, alkaline earth metal, heavy metal or a known nitrogenous base.

 Kind of Application : COMPLETE/CONVENTION.

Application for Patent Number 951/DEL/95 filed on 25.5.95

Convention date 26.5.94/PM 5888/AU.

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office
 Branch, New Delhi – 110 008.

(19 Claims)

A pinch valve comprising:

a flexible sleeve surrounded by a valve body is adapted for attachment to a conduit in communication with a source of fluid;

at least one pinching means disposed on the said flexible sleeve are adapted to pinch the said flexible sleeve and thereby reduce the effective cross-sectional flow area thereof;

actuation means connected to at least one of the said pinching means are operable selectively on said pinching means to regulate fluid flow through the said sleeve; and

mounting means disposed to support the said actuation means independently of the said sleeve.

Indian Classification :- 90 **194388**

International Classification⁷ :- C 03B 9/41

Title :- "AN INVERT AND NECK RING HOLDER MECHANISM FOR DISPLACING A PARISON FROM A BLANK STATION TO A BLOW STATION ON AN I.S. MACHINE"

Applicant :- EMHART GLASS S.A., of Gewerbestrasse 11, P.O. 5069, CH-6330, Cham, Switzerland.

Inventors :- JOSEPH ANTHONY BORBONE – US
STEVEN JOSEPH PINKERTON – US
MARTY JOSEPH GRANT – US.

Kind of Application :- COMPLETE/CONVENTION

Application for Patent Number 3231/del/1998 filed on 03.11.98

Convention date 06.11.97/08/965,378/USA.

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office, New Delhi Branch - 110 008.

(Claims 05)

An invert and neck ring holder mechanism for displacing a parison from a blank station to a blow station on an individual section machine comprising:

an opposed pair of side (122) brackets,

a worm gear housing (120) supporting a worm gear,

a motor/worm housing (118) for supporting said worm gear housing intermediate said opposed side brackets,

a first cylinder assembly extending between one side of said worm gear housing and one of said side brackets,

a second cylinder assembly extending between the other side of said worm gear housing and the other one of said side brackets,

each of said first and second cylinder assemblies including a cylinder (114) having a neck ring holder support and a target (133),

said cylinder being axially displaceable from a first location adjacent said worm gear housing to a second location adjacent the associated side bracket and rotationally displaceable by said worm gear to displace said neck ring holder support through approximately 180° from a first position at said blank station to a second position at said blow station, characterized by

first sensor (129) means for indicating that said first cylinder assembly cylinder is proximate said associated side bracket,

second sensor (124) means for indicating that said first cylinder assembly target is proximate said worm gear housing,

third sensor (129) means for indicating that said second cylinder assembly cylinder is proximate said associated side bracket, and

fourth sensor (134A) means for indicating that said second cylinder assembly target is proximate said worm gear housing,

each of said targets being configured so as to be sensed by the associated sensor means for the entire angular range of displacement of said cylinder.

Kind of Application :- COMPLETE

Application for Patent Number 201/Del/1996 filed on 30/01/1996

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office, New Delhi Branch - 110 008.

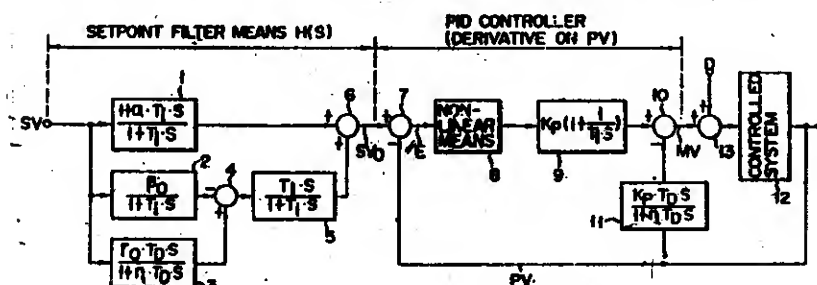

(Claims 5)

A two degree of freedom PID controller comprising

- setpoint filter means for receiving a setpoint value and generating a setpoint value and generating a setpoint signal, characterized in that

- said setpoint filter means comprising:

- coefficient multiplying means for multiplying the setpoint value by a degree of freedom coefficient for a proportional gain, thereby outputting a product,
- 1st lag means having at least a two degree of freedom coefficient for an integral time, and designed to subtract the product from the setpoint value, thereby generating a difference, and
- means for adding the product to the difference, thereby outputting the setpoint signal,
- PI-control operation means for determining a deviation between the setpoint signal and a control value supplied from a controlled system, and performing a PI-control operation on the deviation, thereby outputting a manipulative signal and
- adder means for adding a process disturbance signal to the manipulative signal output by said PI-control operation means, thus obtaining a sum signal, and for supplying the sum signal to said controlled system.

Inventors :-	JOHN PATRICK MUNGOVAN – US and DOUGLAS JOHN ROBERTS - US	
Kind of Application :-	COMPLETE/CONVENTION	
Application for Patent Number	3238/del/1998	filed on 03.11.98
Convention date	06.11.97/08/965,177/USA.	

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office, New Delhi Branch - 110 008.

(Claims 06)

An individual section machine comprising a plurality of individual sections arranged side by side comprising,

a section frame for each section,

bed means for supporting said plurality of section frames including a top wall underlying said section frames, characterized in that

said bed means further including passage means beneath said top wall extending from one side to the other side of said individual section machine,

fluid duct means located within said passage means extending from one side to the other side of the individual section machine,

said top wall of said bed including openings for exposing each of said fluid duct means within each of said sections so that fluid connections can be established from said fluid duct means through said openings in said top wall of said bed.

Kind of Application	-	COMPLETE	
Application for Patent Number	626/del/2003	filed on	22/04/2003

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office, New Delhi Branch - 110 008.

(Claims 4)

A. repeatedly-used drain-proof diaper (1) being used with a diaper piece, the diaper comprising a diaper body (20) and outer ears (21, 22) extending from two sides of the diaper body;

- **a bottom sheet having a T shape (11) and two upper sides thereof being extending with a left and a right ear pieces;**
- **an upper and a lower cover edges fixing to an upper and a lower end of the bottom sheet;**
- **two drain-proof folding edges (12A, 12B) having an inverse L shape fixed to the left and right sides of the bottom sheet and covering two sides of the two drain-proof folding edges' tow upper sides of the drain-proof folding edges (13A, 13B) being extended with a left and a right ear pieces which are formed with the outer ears with the bottom sheet;**
- **two nylon buckles (14A, 14 B) at edges of the two outer ears;**
- **a sticky cloth (15) installed at a lower backside of the bottom sheet for buckling the two nylon buckles; and**

a plurality of tension strips (17A- 17I); an upper end of the bottom sheet and the upper and lower seaming edges of the outer ears having thick tension strips; and slender tension strips being installed at a left and a right sides of the bottom sheet overlapping with the drain-proof folding edges; and inner edges of the two drain-proof folding edges (13A, 13 B) being also installed with slender tension strips;

wherein the upper and lower cover edges (12 A, 12 B) are formed with bags for positioning the diaper piece and the two drain-proof folding edges serve to hinder excrement to drain out from the two sides of the diaper piece, thereby, the diaper piece is detachable from the diaper, the diaper piece is replaceable so that the diaper can be used repeatedly.

Application no 2312/CAL/1997 FILED ON 08.12.1997

*APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003) PATENT OFFICE KOLKATA.***8CLAIMS.**

A mode coding apparatus for use in an interlaced shape coder, of a target block of a binary shape signal, wherein the binary shape signal includes a plurality of pictures and each picture is divided into a multiplicity of blocks of $M \times N$ pixels having one of a first and a second binary values, the target block representing one of the blocks of a current picture to be encoded and M and N being positive even integers, respectively, comprises:

Frame detection circuit (10) for generating a first indication signal if error of the target block with respect to a first reference block is not greater than a predetermined threshold, and generating a second indication signal, if error of the target block with respect to a second reference block is not greater than the predetermined threshold, the respective reference blocks having $M \times N$ pixels and all pixels of the first and the second reference blocks being of the first and the second binary values, respectively;

Frame divider (20) for dividing the target block into a top field and a bottom field, wherein the top field contains every odd row of the target block to have $M/2 \times N$ pixels and the bottom field contains every even row of the target block to have $M/2 \times N$ pixels;

Top field coding circuit (30) and top mode coding circuit (70) for coding the top field to generate a top mode and top field-coded data, wherein the top mode represents a coding condition of the top field-coded data;

Bottom field coding circuit (50) and bottom mode generator (83) for coding the bottom field based on the top field-encoded data to generate a bottom mode and bottom field-coded data, wherein the bottom mode bottom field-coded data, wherein the bottom mode represents a coding condition of the bottom field-coded data;

bottom mode modulator (85) for modifying the bottom mode based on the top mode to generate a modifying bottom mode; and

multiplexor (90) attaching the top mode to the modified bottom mode to generate a mode.

APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003) PATENT OFFICE KOLKATA.

14 CLAIMS.

A method for offering announcements in a communication network, the method comprising the steps of :

- Providing network switching device (MSC/VLR);
- Providing communication terminal equipment (BS, MS) which is connectable to the network switching device (MSC/VLR);
- Enabling both access of subscribers (A) to the communication network (KN) and transitions to at least one additional network (HPLMN/VPLMN) via the communication terminal equipment (BS);
- Controlling the announcement (ANN) via at least one service control point (SCP)
- Offering the announcements (ANN) for a calling subscriber (A) via at least one serviceswitching point (SSP, A-SSP); the service switching point (SSP) being connectable to an intelligent peripheral (IP, A-IP);
- Establishing at least one announcement text (ANT) in the service control point (SCP)
- Receiving and interpreting by the service control point (SCP) a first message (IDP) initiated on the basis of a call of the calling subscriber, (A) the first message (IDP) containing information (IPCA) on the supportability of announcements (ANN) by the intelligent peripheral (IP, A-IP);
- Determining support (IPCA) of an announcement (ANN) by the intelligent peripheral (IP, A-IP);

- Transmitting a second message (PAP) from the service control point (SCP) to the intelligent peripheral (IP, A-IP) if the intelligent peripheral supports the announcements (ANN), the second message (PAP) containing the at least one announcement text (ANT) and additional language information for identifying national language properties of the announcements, (ANN) wherein the additional language information comprises at least a language code (LC) for identifying a language in which the announcement (ANN) of the received announcement text (ANT) occurs via the intelligent peripheral (IP, A-IP)
- Converting the announcement text (ANT) into the announcement (ANN) at the intelligent peripheral; and
- Transmitting the announcement (ANN) via the intelligent peripheral to the calling subscriber (A) on a speech channel (SPCH).

Title : AN IMPROVED METHOD FOR CONTROLLING THE FINAL PREDEFINED SUPERHEAT OUTLET STEAM TEMPERATURE AND THE FINAL PREDEFINED REHEAT OUTLET STEAM TEMPERATURE IN A STEAM GENERATION PLANT

Applicant : ALSTOM POWER INC, OF 2000 DAY HILL ROAD, WINDSOR, CONNECTICUT 06095, USA

Inventor : 1. STEPHEN ARTHUR PIERZCHALA
2. BRUCE WALTER WILHEM

Application no 230/CAL/1998 FILED ON 12.2.1998
(CONVENTION NO. 08/801,714 FILED ON 4.2.1997 IN USA)

APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003) PATENT OFFICE KOLKATA.

2) CLAIMS.

An improved method for controlling the final predefined superheat outlet temperature and for controlling the final predefined reheat outlet temperature and in a steam generation plant, in particular from a circulating fluidized bed steam generator, the steam generation plant comprising a high pressure turbine, a low pressure turbine, and said circulating fluidized bed steam generator of said steam generation plant, having a furnace volume defined by a plurality of water wall tubes and embodying there within at least superheat surface, a multichambered backpass volume connected in fluid flow relation with the furnace volume and embodying in one chamber thereof at least superheat surface and embodying in another chamber thereof at least reheat surface, a first circulatory fluid flow path operative as an evaporative steam loop, and a second circulatory fluid flow path operative as a superheat steam-reheat steam loop and having a saturated steam segment, a superheat steam segment, a reheat steam segment and an economizer segment, the method comprising the steps of :

- a. Effecting a flow of saturated water within the waterwall tubes defining the furnace volume;
- b. Effecting a combustion of fuel and air within the furnace volume so as to thereby produce therefrom hot gases and solids;
- c. Effecting a heat transfer from the hot gases produced from the combustion of fuel and air within the furnace volume to the saturated water flowing within the waterwall tubes defining the furnace volume so as to thereby produce from such heat transfer a mixture of saturated water and saturated steam within the waterwall tubes defining the furnace volume.

- d. Effecting the separation of the saturated water from the mixture of saturated water and saturated steam after the mixture of saturated water and saturated steam has flowed through the waterwall tubes defining the furnace volume and thereafter effecting the return of the separated saturated water to the waterwall tubes defining the furnace volume;
- e. Effecting the separation of the saturated steam from the mixture of saturated water and saturated steam after the mixture of saturated water and saturated steam has flowed through the waterwall tubes defining the furnace volume and thereafter effecting the flow of the separated saturated steam to and through the multichambered backpass volume;
- f. Effecting the flow of the separated saturated steam from the multichambered backpass volume to and through a low temperature superheat surface and during the passage therethrough of the separated saturated steam effecting the heating of the separated saturated steam to a temperature sufficient to transform the separated saturated steam to superheat steam;
- g. effecting the flow of the superheat steam from the low temperature superheat surface to and through a finishing superheat surface and during the passage therethrough of the superheat steam effecting the heating of the superheat steam to a final predefined superheat outlet steam temperature;
- h. effecting the flow of superheat steam having a final predefined superheat outlet steam temperature from the finishing superheat surface to and through the high pressure turbine and during the passage therethrough of the superheat steam effecting the expansion thereof;
- i. effecting the flow of the superheat steam from the high pressure turbine to and through a reheat surface and during the passage therethrough of the superheat steam effecting the heating of the superheat steam to a final predefined reheat outlet steam temperature;
- j. effecting the flow of the superheat steam having a final predefined reheat outlet steam temperature from the reheat surface to and through a low pressure turbine and during the passage therethrough of the superheat steam effecting the expansion thereof such that superheat steam is transformed to saturated steam and
- k. effecting the control over the predefined superheat outlet steam temperature and the control over the predefined reheat outlet steam temperature by manipulating the suspension density within the furnace volume of the solids produced from the combustion of fuel and air within the furnace volume.

Inventor	:	1. STEFANO CICALE. 2. STEFANO FORTUNATI 3. GIUSEPPE ABBRUZZESE	
Application no	:	2084/CAL/1997 FILED ON 05.11.1997 (CONVENTION NO. RM96A000904 FILED ON 24.12.1996 IN ITALY.)	

APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003) PATENT OFFICE KOLKATA.

14CLAIMS.

Process for the production of oriented-grain electrical silicon steel having high magnetic characteristics, in which a silicon steel containing from 2.5 % to 4.5% bw of silicon; from 150 to 750 ppm, preferably from 250 to 500 ppm, C; from 300 to 4000 ppm, preferably from 500 to 2000 ppm of Mn; less than 120 ppm, preferably from 50 to 70 ppm, of S; from 100 to 400 ppm, preferably from 200 to 350 ppm, of Al_{sol}, from 30 to 130 ppm, preferably from 60 to 100 ppm, of N; and less than 50 ppm, preferably less than 30 ppm of Ti, the remainder consisting of iron and minor impurities, undergoes continuous casting to from slabs, high-temperature annealing hot-rolling, and cold-rolling in a single stage or in moreh than one stage, the cold-rolled strip thus obtained being continuously annealed to carry out primary recrystallization, and decarburization then coated with annealing separator, and box-annealed for a secondary-recrystallization final treatment, characterized by the combination in sequence of the following steps:

- I. Carrying out on the continuously cast slabs an equalization heat treatment at a temperature between 1200°C and 1320 °C;
- II. Hot-rolling the slabs thus obtained, and coiling the resultant strip at a temperature of less than 700°C;
- III. Carrying out a fast heating of the hot-rolled strip at a temperature of between 1000°C and 1150°C, with subsequent cooling down to and stopping at a temperature of between 800°C and 950°C, followed by quenching :
- IV. Carrying out cold-rolling in at least one stage;

- V. Carrying out continuous decarburization annealing of the cold-rolled strip for a total time of between 50 and 350 sec; at a temperature of between 800°C and 950°C in a wet nitrogen-hydrogen atmosphere, with pH_2O/pH_2 ranging between 0.3 and 0.7
- VI. Carrying out nitriding annealing at a temperature of between 850°C and 1050°C, for a period of time of between 15 and 120 sec, feeding into the furnace a nitrogen-hydrogen based gas containing NH_3 in quantities of between 1 and 35 standard litres per kg of strip, with a water vapour content of between 0.5 and 100 g/m³.
- VII. Carrying out the usual final treatments including secondary-recrystallization annealing.

APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003) PATENT OFFICE KOLKATA.

3 CLAIMS.

A thermostat for an automotive engine cooling system, the thermostat having a housing having a flange for attaching thereof to a conduit member, an actuating rod secured to the housing at a first end thereof, a guide member slidably mounted on the actuating rod, a resilient seal spool provided around a second end portion of the actuating rod and hermetically secured to the guide member, a heat sensitive cylinder housing the seal spool and secured to the guide member, wax pellets provided in the heat sensitive cylinder to enclose the seal spool a lubricant oil provided in a space between the seal spool and the actuating rod, a main valve provided on the guide member, and a return spring for urging the main valve to a valve seat formed on the flange, the improvement comprising:

The flange having at least one hole so as to pass a coolant, resulting the string constant of return spring can be reduced and thickness of the resilient seal spool set between 25% and 5% of the diameter of the actuating rod.

4CLAIMS.

An improved coaster comprising an encasement having a top plate, a spring (s) prepositioned inside a number of a segments or a surround partly or fully inside in its peripheral region, a lid cover with its own surround carried by a support standing over the encasement, an illuminating source and a musical sound source incorporated inside, on or within the encasement a member or plurality of members are interlinked, the whole set up being such that when the spring is pressed against by the top plate on receiving the load of a glass, the segments come out to fence the periphery and with the help of the interlinked member(s) the motion is transmitted to release the lid cover to make it fall on glass top, the illuminating source and the musical sound source operate by their respective contact point by virtue of downward movement of the top plate, and inversely, on releasing the load by lifting the glass a push to the top plate is effected by the said spring(s) thereby all the said movements along with the respective function reversibly get back to their original position and such combined effects are well adapted to meet the condition of practical use.

27CLAIMS.

A method of transmitting a plurality of signals within a frequency band from a transmitting location, selective reception by a subscriber receiver located within a cell, comprising:

Transmitting analog signals occupying substantially all of said frequency band, with a given polarization, said analog signals including program signals representing at least one communicated program transmitted at a program carrier frequency within the band and occupying one program channel,

Characterised in that the method further comprises:

Tranmitting digital signals representing at least one digital communication, at a first bit rate, using at least a first carrier frequency which is within said program channel, said digital signals being entirely within said band and occupying substantially less of said frequency band than the analog signals representing said one communicate program, Selecting said first carrier frequency, said first bit rate, and a given transmission power of the digital transmission such that a subscriber receiver can selectively receive and reliably detect either said one communicate program or said digital communication, and Reducing interference between the digital and the analog signals by transmitting the digital signals with a polarization, which is different from, said give polarization.

19CLAIMS.

A modular power supply for receiving main electrical power and supplying an electrical apparatus, comprising:

A housing adapted to receive a plurality of uninterruptible power supply modules, the housing including a mains power input operatively coupled to receive said main electrical power and an electrical power outlet operatively coupled to said electrical apparatus :

At least one said uninterruptible power supply module, the module including an energy storage device;

A charging circuit coupled to the energy storage device and operatively coupled via said housing to receive said main electrical power for storing energy storage device;

A power supply circuit coupled to the energy storage device and operatively coupled via said housing to receive said mains electrical power, and operatively couple for supplying electrical power to the electrical apparatus via the electrical power outlet in said housing;

A control circuit coupled to the power supply circuit and arranged to control the power supply circuit so as to selectively provide electrical power in use, to the electrical apparatus from the source of the mains electrical power or from the energy storage device; and

Coupling means adapted to electrically couple the uninterruptible power supply module to the mains power input and the electrical power outlet of said housing when the uninterruptible power supply module is received therein

Wherein said housing constructed so that each of said at least one uninterruptible power supply module which is received in said housing is coupled to operate in parallel with each other uninterruptible power supply module therein.

APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003) PATENT OFFICE KOLKATA.

15CLAIMS.

An improved replaceable cutting head (1,100) for co-axial coupling thereof, along a coupling axis (A,A') with a tool shank (2, 102) in a self-clamping fashion, the cutting head (1,100) having a cutting portion (5,105) with at least one cutting edge (8,108) formed adjacent a leading end (3,103) thereof and a mounting portion (6,106) extending between said cutting portion (5,105) and a trailing end (4,104) of the cutting head (1,100) and mating with mounting portion (30,130) of the tool shank (2,102) ; said mounting portion (6,106) of the cutting head (1,100) comprising:

A centering section (12,110) having a peripheral centering surface (26,111) which extends circumferentially with respect to said coupling axis (A,A') and has a substantially conical shape at least at two portions thereof, which portions diverge along said axis (A,A') towards a broad end (13,118) of the peripheral centering surface (26,111);

A positioning section (10,112) having at least two phriptherally disposed and circumferentially extending and spaced apart positioning surfaces (16,116) adapted for the provision of an axial support of the cutting head (1,100) on the tool shank (2,102) each positioning surface (16,116) being inclined with respecto said coupling axis (A,A');

One of the positioning (10,112) and centering sections (12,110) being formed with at least two circumferentially spaced apart fixation wings (24,115) with, respectively, either said positioning surface (16,116) and or said portion of centering surface (26,111) belonging thereto,

Characterized in that: an axial distance from the to said broad end (13,118) of the peripheral entering surface (26,111) increases in a direction generally corresponding to the direction of cutting forces acting on said at least one cutting edge (8,108) during a cutting operation;

APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES
2003) PATENT OFFICE KOLKATA.**12 CLAIMS.**

A four wheeled card with tilting mechanism comprising :

A main chassis (G) supported on a front wheel axle (I) and a rear wheel axle (K), pairs of wheels (H) being mounted on said axles (I,K);

A card body (V) tiltably attached to the main chassis for carrying goods thereon;

A tilting mechanism comprising a gear box (P) with a handle (P1) for tilting the cart from a normal position to a tilted position and vice versa, said gear box being attached to said chassis (G),

A wheel brake (M) connected to the wheels for controlling the speed of the cart;

A stand (O) attached to the front wheel axle (I) for permitting swift sharp turns of the cart;

A cart connector (Q) connecting the cart to a yoke (R) ; and

A tilting lock (T) for keeping the cart body in the normal position when the tilting mechanism is not in use.

NOTIFICATION

In pursuance of leave granted Under Section 20(1) of the patents Act, 1970 application No. 1348/Del/93 (188043) of INTERNATIONAL POWER PLC., (formerly National Power Plc.) a British company of Senator House, 85 Queen Victoria Street, London EC4V 4DP, United Kingdom, has been allowed to proceed in the name of INNOGY PLC., a British company of Windmill Hill Business Park, Whitehall Way, Swindon, Wiltshire SN5 6PB, United Kingdom.

In pursuance of leave granted Under Section 20(1) of the patents Act, 1970 application No. 807/Del/2000 (188340) of DSM ANTI-INFECTIVES B.V. (formerly known as DSM GIST B.V., which company was formerly known as GIST-BROCADES B.V.,) of Wateringseweg 1, 2611 XT DELFT, The Netherlands, has been allowed to proceed in the name and address of DSM N.V. of Het Overloon 1, 6411 TE HEERLEN, The Netherlands.

In pursuance of leave granted Under Section 57 of the Patents Act, 1970 application No. 1348/Del/93 (188043) NATIONAL POWER PLC., a British Company of Senator House, 85 Queen Victoria Street, London EC4V 4DP, United Kingdom has been allowed to proceed in the name of INTERNATIONAL POWER PLC.

In pursuance of leave granted Under Section 57 of the Patents Act, 1970 application No. 516/Del/98 (188177) GIST-BROCADES B.V., of Wateringseweg 1, P.O. Box 1, 2600 MA Delft, The Netherlands has been allowed to proceed in the name and address of DSM GIST B.V., of Wateringseweg 1, 2611 XT DELFT, The Netherlands.

RESTORATION PROCEEDINGS UNDER SECTION 60 OF THE PATENTS ACT, 1970

Notice is hereby given that an application was made under Section 60 of the Patents Act, 1970 for the restoration of Patent No. 173031 granted to Wolfgang Priesemuth for an invention relating to Arrangement of work locations.

The Patent ceased on 26.06.2003 due to non-payment of renewal fees within the prescribed time and the cessation of the Patent was notified in the Gazette of India, Part III, Section 2 dated 16.10.2004.

Any interested person may give notice of opposition to the restoration by leaving a notice on Form 14 in duplicate, with the Controller of Patents, The Patent Office, Nizam Palace, 2nd MSO Building, 5th, 6th & 7th Floors, 234/4, Acharya Jagdish Chandra Bose Road, Kolkata-700020 within two months from the date of advertisement of this Notice under Rule 85 of the Patents Rules, 2003. A written statement in triplicate, setting out the nature of the opponents interest, the facts upon which he bases his case and the relief he seeks, shall be filed with the notice or within two months from the date of the notice.

Notice is hereby given that an application was made under Section 60 of the Patents Act, 1970 for the restoration of Patent No. 188200 granted to Fleetguard, Inc. for an invention relating to A self driven bypass circuit conestack centrifuge.

The Patent ceased on 09.10.2003 due to non-payment of renewal fees within the prescribed time and the cessation of the Patent was notified in the Gazette of India, Part-III, Section 2 dated 16.10.2004.

Any interested person may give notice of opposition to the restoration by leaving a notice on Form 14 in duplicate, with the Controller of Patents, The Patent Office, Nizam Palace, 2nd MSO Building, 5th, 6th & 7th Floors, 234/4, Acharya Jagdish Chandra Bose Road, Kolkata-700020 within two months from the date of advertisement of this Notice under Rule 85 of the Patents Rules, 2003. A written statement in triplicate, setting out the nature of the opponents interest, the facts upon which he bases his case and the relief he seeks, shall be filed with the notice or within two months from the date of the notice.

OPPOSITION PROCEEDING (U/S. 25)

The opposition as entered by Shri Vikas Malu, New Delhi to the grant of Patent on Application No. 188090 (166/BOM/1997) made by Shri Jagdish Mohanlal Joshi, Mumbai as notified in the Gazette of India, Part II, Section 2 dated 17th August, 2002 has been dismissed.

The opposition as entered by M/s. Ghodawat Pan Masala Products (India) Pvt. Ltd., A.P.-Chipri, Dist. Kolhapur to the grant of Patent on Application No. 188090 (166/BOM/1997) made by Shri Jagdish Mohanlal Joshi, Mumbai as notified in the Gazette of India, Part III, Section 2 dated 17th August, 2002 has been dismissed.

The opposition as entered by Shri Rasiklal Manikchand Dhariwal, Pune to the grant of Patent on Application No. 188090 (166/BOM/1997) made by Shri Jagdish Mohanlal Joshi, Mumbai as notified in the Gazette of India, Part III, Section 2 dated 17th August, 2002 has been dismissed.

The opposition as entered by Amit Kedia, Rasik Niwas, NS road No. 4, Juhu Scheme, Mumbai-400 056 to the grant of a Patent on Application No. 191538 (IN/PCT/2000/00018/MUM) made by Medici, Guido of Via Fratelli bandiera, 76, I-30175 marghera Italy, Italian national as notified in Gazette of India, Part III, Section 2 dated 6th December, 2003 has been dismissed and it is ordered that the application for Patent No. 191538 shall proceed to sealing in prescribed manner.

The opposition as entered by Compare Equipments Co., Aman Chambers, 1st Floor, 113, Mama Parmanand Marg, Mumbai-400 004, to the grant of a Patent on Application No. 191538 (IN/PCT/2000/00018/MUM) made by Medici, Guido of Via Fratelli bandiera, 76, I-30175 marghera Italy, Italian national as notified in Gazette of India, Part III, Section 2 dated 06.12.2003 has been dismissed and it is ordered that the application for Patent No. 191538 shall proceed to sealing in prescribed manner.

The opposition as entered by Yatin Tipnis, Heatex Plant & Equipments, Agarwal Compound, 95/A, Kobad Road, Near Pratap Talkies, Thane (West), Maharashtra-400 601 to the grant of a Patent on Application No. 191538 (IN/PCT/2000/00018/MUM) made by Medici, Guido of Via Fratelli bandiera, 76, I-30175 marghera Italy Italian national as notified in Gazette of India, Part III, Section 2 dated 06.12.2003 has been dismissed and it is ordered that the application for Patent No. 191538 shall proceed to sealing in prescribed manner.

CANCELLATION PROCEEDINGS UNDER SECTION 19 (1)

“An application in the name of New Wave Industries for Cancellation of Registered Design No. 188336 was filed on 15.09.04 in class 10-07 in the name Klas Tape Company.”
